What is SARE?
Since 1988, the Sustainable Agriculture Research & Education (SARE) program has been the go-to USDA grants and outreach program for farmers, ranchers, researchers and educators who want to develop innovations that improve farm profitability, protect water and land, and revitalize communities. To date, SARE has awarded over $333 million to more than 7,802 initiatives.

SARE is grassroots with far-reaching impact
Four regional councils of expert practitioners set priorities and make grants in every state and island protectorate.

SARE communicates results
SARE shares project results by requiring grantees to conduct outreach and grower engagement; and by maintaining an online library of practical publications, granteeproduced information products and other educational materials.

SARE: Advancing the Frontier of Sustainable Agriculture in...
South Dakota

Project Highlight: Dung Beetles Beneficial to Rangelands

The flies and parasites that inhabit the native rangeland in northeastern South Dakota cause millions of dollars of damage to the ranchers who use that land to graze cattle and sheep. Ranchers stem their losses using pesticides but one producer, Linda Simmons, was concerned about pesticide resistance after she faced a sudden failure of insect control. She was also concerned that pesticides were reducing numbers of beneficial insects such as dung beetles that were her ally in controlling these pests.

In response, she designed a SARE-funded project to find ways that preserves the functions of the rangeland ecosystem and would lead to efficient and profitable livestock production. The project demonstrated the efficacy of reducing pesticide use through non-chemical controls, integrated pest management and rotational grazing. Simmons worked with her neighbors, since fly control is more effective when bordering pastures and feedlots are included.

She discovered that dung beetles are especially helpful as they consume manure, making it less available to flies and parasites. Simmons developed many documents about dung beetles and non-chemical fly control that are free to producers. Thirty producers and land managers attended a field day, demonstrating great interest in the value of encouraging dung beetles.

For more information on this project, see sare.org/projects, and search for project number FNC14-977.

SARE in South Dakota

northcentral.sare.org/state-programs/south-dakota

$3,878,723 in total funding
119 grant projects (since 1988)

For a complete list of grant projects state by state, go to www.sare.org/state-summaries
SARE Grants in South Dakota

Total awards: 119 grants

- 26 Research and Education
- 7 Professional Development Program
- 53 Farmer/Rancher
- 14 Graduate Student
- 8 Youth Educator
- 8 Youth
- 3 On Farm Research/Partnership

Total funding: $3,878,723

- $2,810,376 Research and Education
- $369,135 Professional Development Program
- $417,741 Farmer/Rancher
- $150,698 Graduate Student
- $18,335 Youth Educator
- $2,580 Youth
- $109,858 On Farm Research/Partnership

Find a complete list of projects on page 3.

SARE's Impact

53 percent of producers report using a new production technique after reading a SARE publication.

79 percent of producers said they improved soil quality through their SARE project.

64 percent of producers said their SARE project helped them achieve higher sales.

Learn about local impacts at: northcentral.sare.org/state-programs/south-dakota

Contact Your SARE State Coordinator

SARE sustainable ag coordinators run state-level educational programs for Extension and other ag professionals, and many help grant applicants and recipients with planning and outreach. Visit northcentral.sare.org/state-pages/south-dakota to learn more.

For detailed information on SARE projects, go to www.SARE.org

SARE is funded by the USDA’s National Institute of Food and Agriculture (NIFA).

This report includes summaries of competitive grant programs only. Some competitive grant programs that are no longer offered may be included or excluded from the totals in this report depending on the grant program and SARE region.
South Dakota has been awarded $3,878,723 grants to support 116 projects, including but not limited to, 23 research and/or education projects, 7 professional development projects and 53 producer-led projects. South Dakota has also received additional SARE support through multi-state projects.
